

# FLASH TECHNOLOGY FOR WEBSITES

Flash Technology is one of the fastest growing content programs on the Internet.

With Flash you can create some of the most interesting and creative animation for your website content.

Media is quickly becoming the most sought after additions to a website.

Flash Studio 8 has been released and has been adopted by millions of internet users, this allows you to make use of the installed flash player without installing any special software and this also allows a certain freedom in presentations.

Video you can present video publications about your products, inform your customers in the most beneficial way possible, in their own homes.

Media on the Internet is a great way to reach new customers.

Take a look at our contact for it was created using FLASH technology to handle your website email communications.

If you look to your left you will see articles links in PDF (portable document format)

SWF (which is a flash container) for publishing text and HTML

We publish our short articles in sever different formats to acquaint you with the various formats available for your new website.

Content is perhaps one of the most overlooked aspects of designing a web page.

It can also be very challenging, keeping your website fresh with new content can make the difference in getting new customers to your website and your location.

There are many ways to produce flash content online.

Just do a google search for flash content and you will see just how many different ways you can produce flash for your website.

Take a look at some of our Flash based websites you can check out AlbanyEveningLions.com for an example.
